Announcement of Material Change Due to Discontinuation of Raw Material Production

Dear Sirs:

We wish to express our gratitude for your continued prosperity. And thank you very much for your continued patronage of our products.

We would like to inform you that we will change one of the solvents used for our printing and marking paints and remover to alternative raw materials because production was discontinued. We appreciate your understanding and cooperation.

1. Subject Products

Tecmarker Paint E Type and PLA-II and their Removers

(Refer to the list on the exhibit for the detailed product types.)

2. Reason and Content of Change

Along with the discontinuation of manufacturing of methyl glycol acetate (MMGAC), a secondary solvent used for the paint and remover of our products, we will change it to an alternative solvent.

3. Influence of Change

Although MMGAC was a substance governed by the PRTR Law, the SDS will be changed because the alternative solvent will not be controlled under the law. The display on the label will also change.

Note that there is no influence on the nature or printing quality of the products before and after the change, and there is no influence from mixing of the products before and after change.

4. Timing of Change

Tecmarker E type will be switched sequentially from production after April 2018 and Tecmarker PLA-II will be switched sequentially from production after July 2018. As for the timing of shipments, please note that they will be switched after the end of the stock.
